

HYPERDEX

Modular Cube

Hyperdex is among the first DeFi protocols whereby any user may function as a 'fund manager' by creating and deploying their own investment strategies for other users to invest in.

Via the Hyperdex platform, strategy creators have access to a wide variety of tools and technical indicators to build their strategies - without any programming experience needed.

Cube Creation Interface

Via the Hyperdex platform, Modular Cube creators have access to a cube creation interface to easily create and deploy their investment strategies - no coding experience needed!

Users may create simple strategies such as buying / selling an asset once a certain price is reached, or more complex ones that rely on technical indicators (e.g. RSI, MACD, EMA, etc.)

For Creators...

Three interlocking puzzle pieces arranged horizontally. The left piece is purple and contains the text 'Over 200 technical indicators'. The middle piece is blue and contains the text 'Limit, stop, and other order types'. The right piece is purple and contains the text 'No coding experience needed'.

Over 200

Scoreboard

The performance data of each Modular Cube will be listed on the platform in two forms: live and historic.

Live performance is available in real time, showing a rank based on current data

Historic performance is available upon expiration of the cube, where the final performance data will be listed

The ranking of each cube creator will be displayed on the Hyperdex platform, showing each cube creator's username and allowing investors to find top performers backed by historical data

Cube Parameters

Modular Cube creators have access to over 200 technical indicators and functions, including:

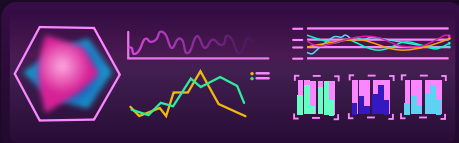

- Standard order types (limit, market, stop)
- Technical and graphical analysis indicator signals
- Leverage (up to 10x)
- Time-based orders
- Reverse (i.e. automatically flip a positions direction)
- And more...

Position Data

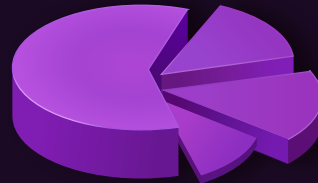

Investors will be able to see a cubes data and performance at all times via a plugin displaying the relevant performance data for a specific cube.

Data relating to an individual, such as PNL, will also be available.

Proportional Stake

Upon entry, a user's proportional share of the Modular Cube liquidity pool is recorded in order to accurately reflect each investors PNL according to their entry and exit.

Cube Commission

Modular Cube creators will be able to assign a fee schedule similar to that of an Algo Trading Cube, whereby they may select a percentage for both management and performance fees. Hyperdex will be allocated a portion of fees collected by each cube.

Modular Cube Fees

- Management: 1-3%
- Performance: 10-30%

Hyperdex Commission Fees

- Entry / administration fee may apply.
